

# Git Cheat Sheet

**git clone *url***

Creates a local copy a remote Git repository on your local machine.

**git status [-s]**

See what Git thinks about your files.

**git add -A**

Prepare all of your changes for a commit.

**git commit -m "*I did something*"**

Commit all staged changes into the local Git repository.

**git push origin master**

Upload any recent local commits to the remote Git repository.
